

Deployment Part 2

Working with the Project Deployment Model

hardcore dev and IT training

Overview

- **SSIS Catalog**
- **Deployment Options**
- **Environments**
- **Package Execution**

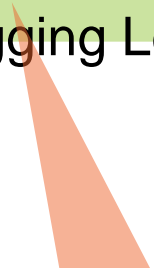

Integration Services Catalog

Integration Services Catalog Properties

Operations Log:

- Clean Logs Periodically
- Retention Period
- Logging Level

None
Basic (default)
Performance
Verbose

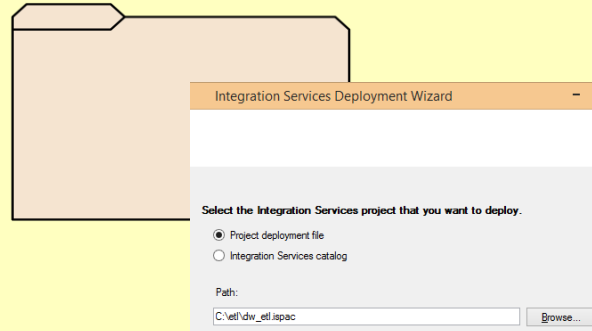

Project Versioning:

- Maximum Versions per Project
- Remove Old Versions

Deployment Options

SSDT + Wizard

ISPAC + Wizard

```
DECLARE @ProjectBinary as varbinary(max)
DECLARE @operation_id as bigint
Set @ProjectBinary = (SELECT * FROM OPENROWSET(BULK
'C:\etl\dw_etl.ispac', SINGLE_BLOB) as BinaryData)

Exec catalog.deploy_project @folder_name =
'DW_ETL_copy', @project_name = 'dw_etl', @Project_Stream
= @ProjectBinary, @operation_id = @operation_id out
```

ISPAC + T-SQL

SSDT + Wizard Deployment

Database server hosting SSISDB

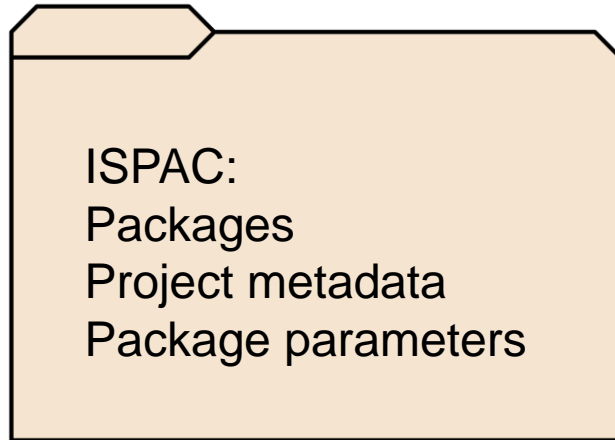

The screenshot shows the 'Integration Services Deployment Wizard' window, specifically the 'Select Destination' step. The left sidebar contains a list of steps: 'Introduction', 'Select Source', 'Select Destination' (which is highlighted in blue), 'Review', and 'Results'. The main area of the wizard has a title bar with a green icon and the text 'Select Destination'. Below the title bar, there is a 'Help' button. The main content area contains the instruction: 'Enter the destination server name and where the project will be located in the Integration Services catalog.' There are two input fields: 'Server name:' with a text box containing a single dot '.' and a 'Browse...' button; and 'Path:' with a text box containing '/SSISDB/DW_ETL/ssis-adv-2-m4' and a 'Browse...' button. Two red arrows point from external text labels to these fields: one from 'Database server hosting SSISDB' to the 'Server name' field, and another from 'Path = SSISDB + Folder Name + Project Name' to the 'Path' field.

Path = SSISDB

+ Folder Name

+ Project Name

ISPAC + Wizard Deployment

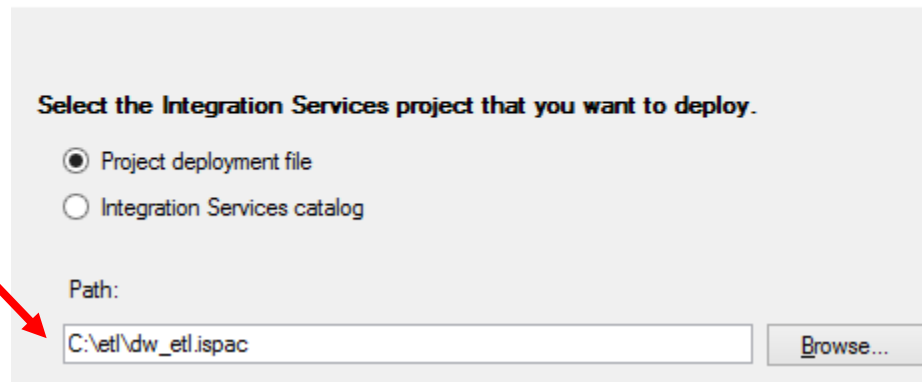

Create ISPAC

- SSDT – Build Project
- SSMS – Export Project

ISPAC path

ISPAC + Wizard Deployment

Silent

ISPAC Source Path

```
IsDeploymentWizard /S /SP:"C:\etl\dw_etl.ispac"  
/DS:"<myServerName>\<Instancename>" /DP:"/SSISDB/DW_ETL"
```

Destination Server

Destination Path =
SSISDB +
Folder Name

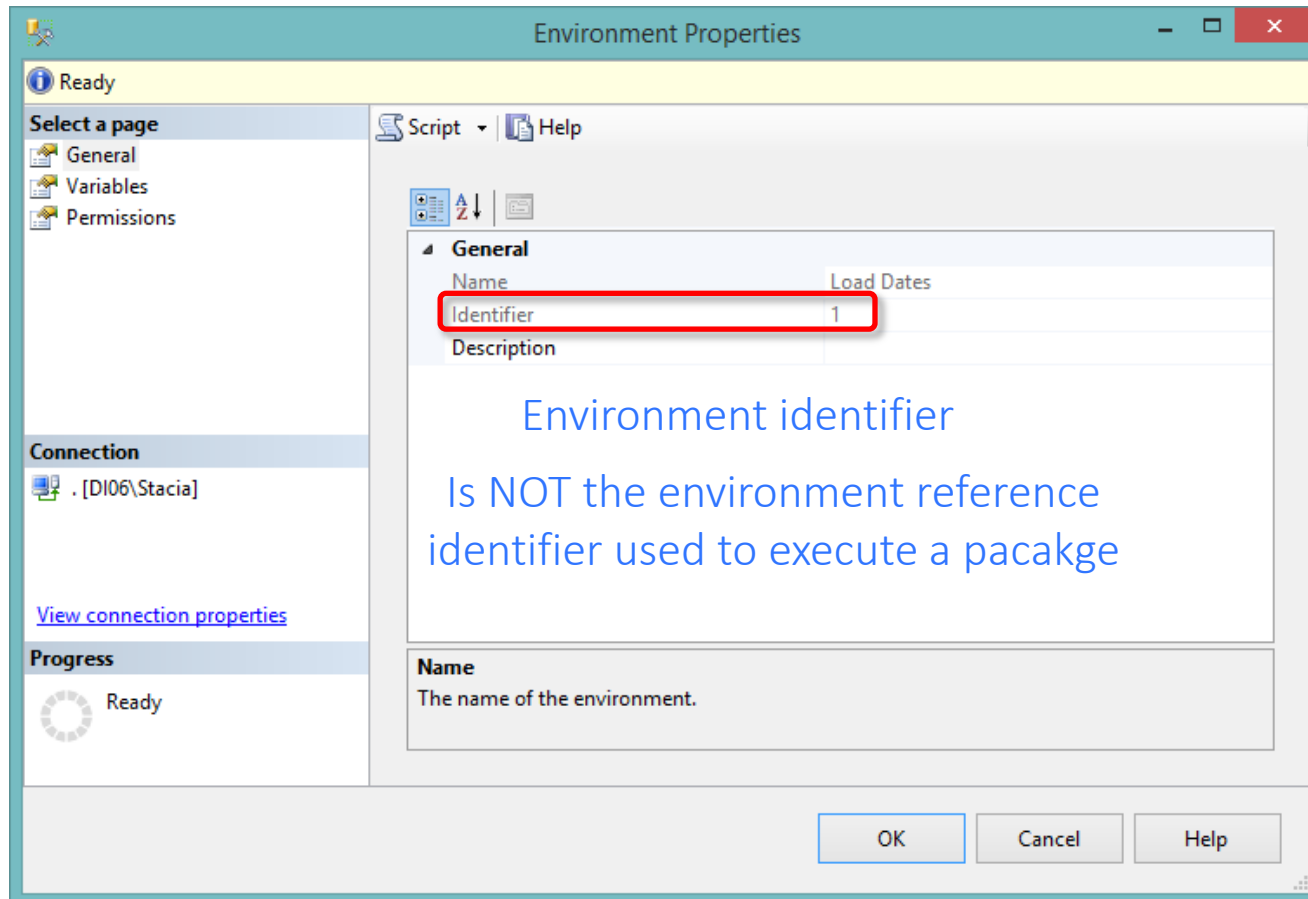

ISPAC + T-SQL Deployment

```
DECLARE @ProjectBinary as varbinary(max)
DECLARE @operation id as bigint
Set @ProjectBinary = (SELECT * FROM OPENROWSET(BULK
'C:\etl\dw_etl.ispac', SINGLE_BLOB) as BinaryData)
Exec catalog.deploy_project @folder_name = 'DW_ETL_copy',
@project_name = 'dw_etl', @Project_Stream = @ProjectBinary,
@operation_id = @operation_id out
```

ISPAC to varbinary variable

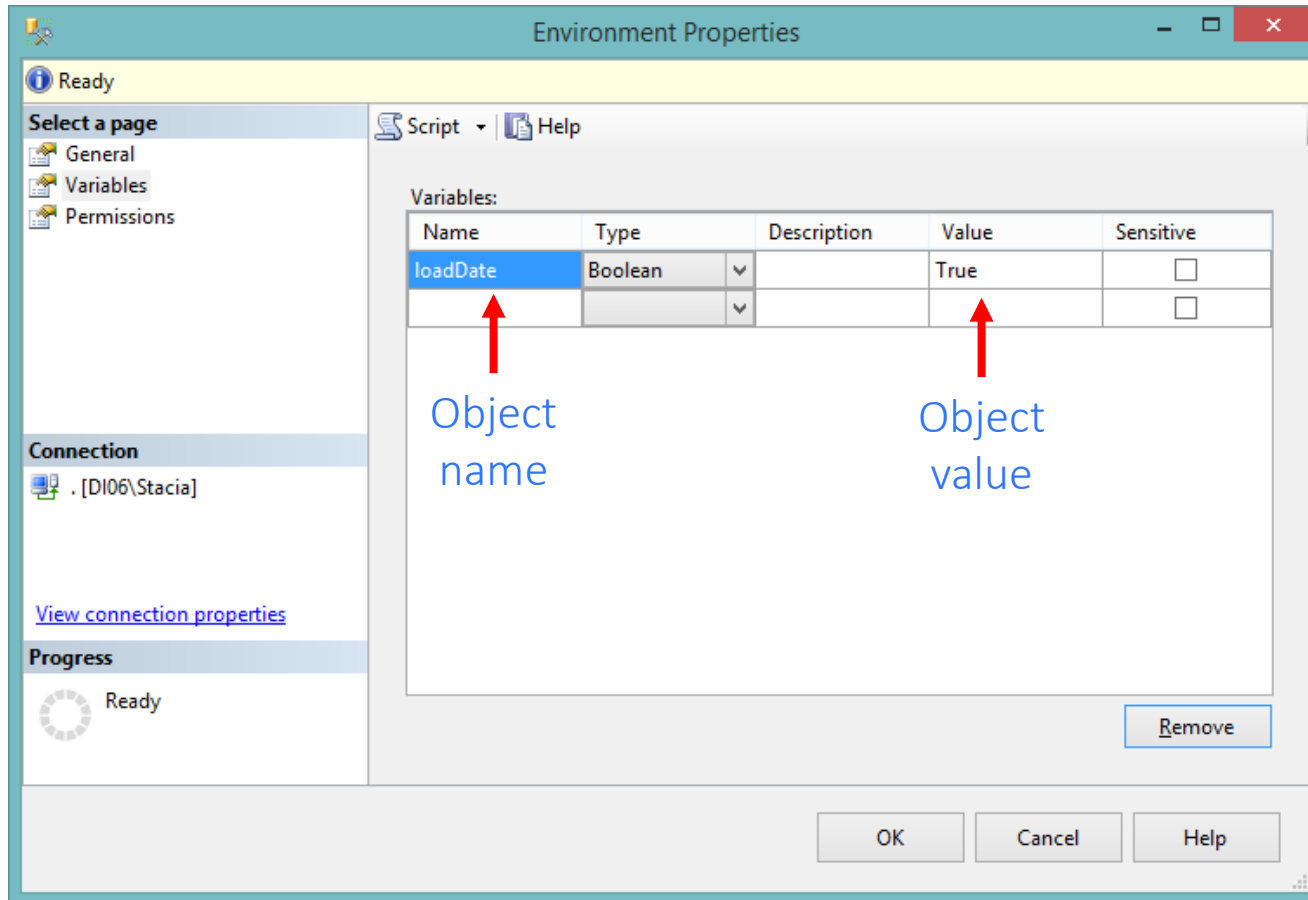

Built-in catalog stored procedure

Environments

T-SQL approach:
create_environment stored procedure

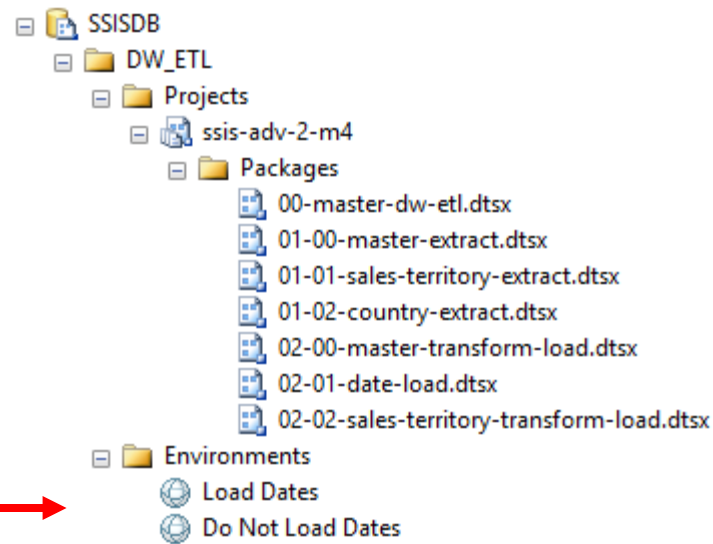

Environments

Environment variables replace values for:

- Project parameters
- Package parameters
- Connection manager properties

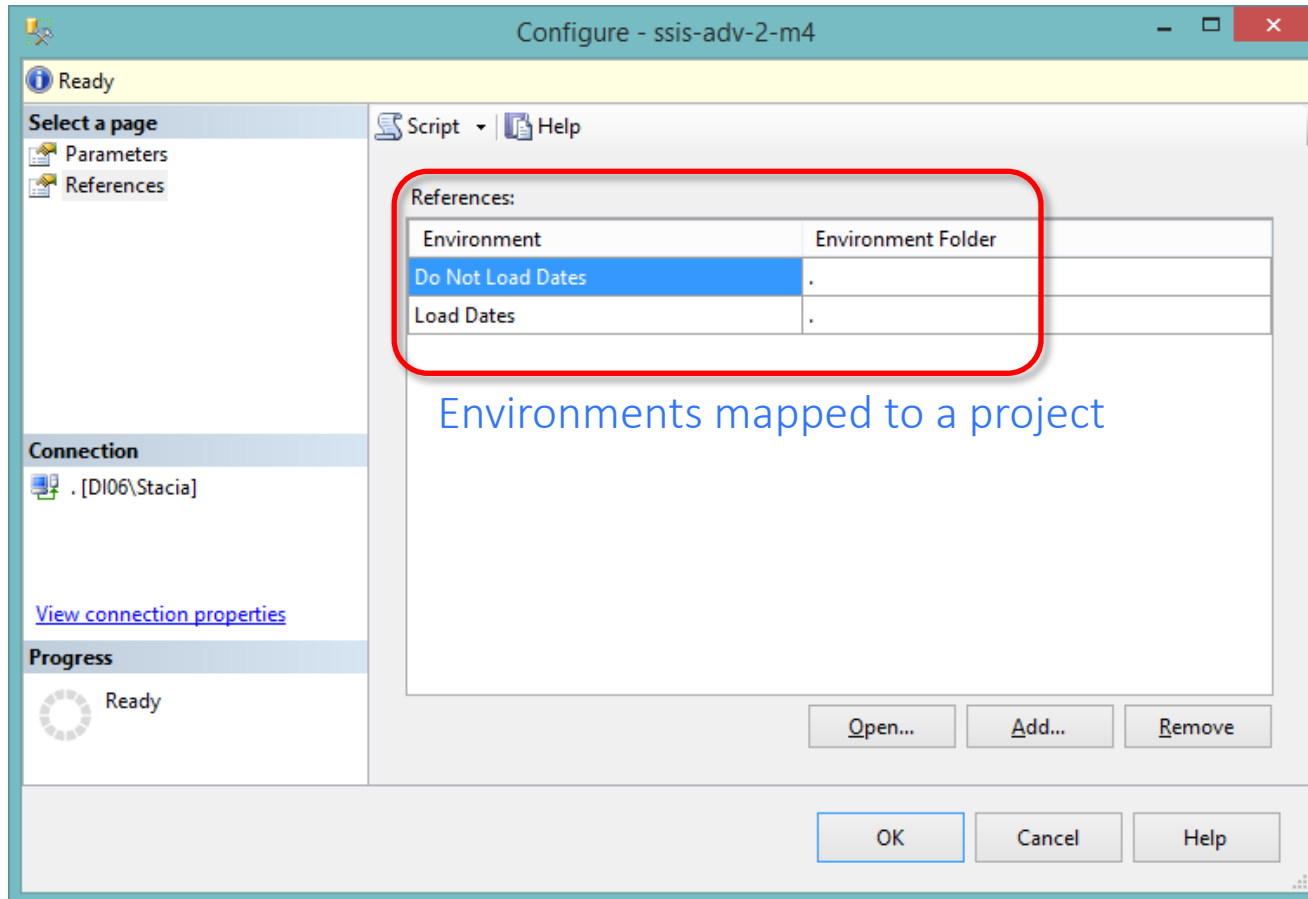

Environments

Multiple
environments
per folder

Environments

Environments

Set Parameter Value

Parameter:
[ssis-adv-2-m4].[loadDate]

Type:
Boolean

Description:

Value

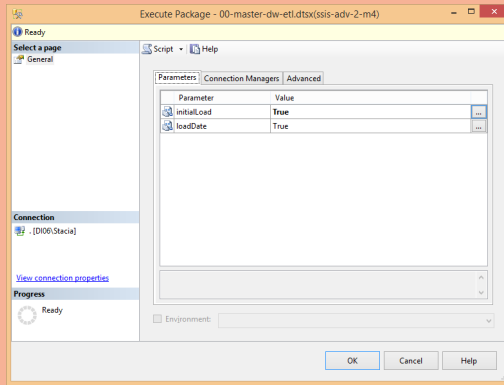

☐ Edit value:

☐ Use default value from package True

☒ Use environment variable: loadDate

OK Cancel Help

Package Execution

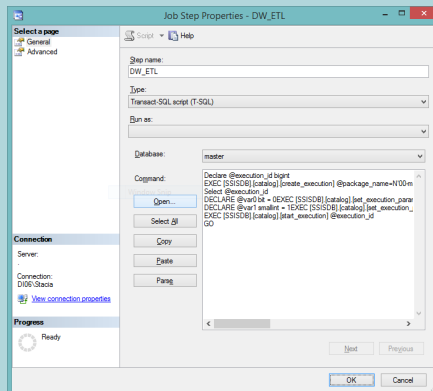

User Interface

```
Declare @execution_id bigint
EXEC [SSISDB].[catalog].[create_execution] @package_name=N'00-master-
dw-etl.dtsx', @execution_id=@execution_id OUTPUT,
@folder_name=N'DW_ETL',
@project_name=N'ssis-adv2-m4', @use32bitruntime=False,
@reference_id=1

Select @execution_id
DECLARE @firstLoad smallint = 0
EXEC [SSISDB].[catalog].[set_execution_parameter_value]
@execution_id, @object_type=20, @parameter_name=N'initialLoad',
@parameter_value=@firstLoad

EXEC [SSISDB].[catalog].[start_execution] @execution_id
GO
```

T-SQL

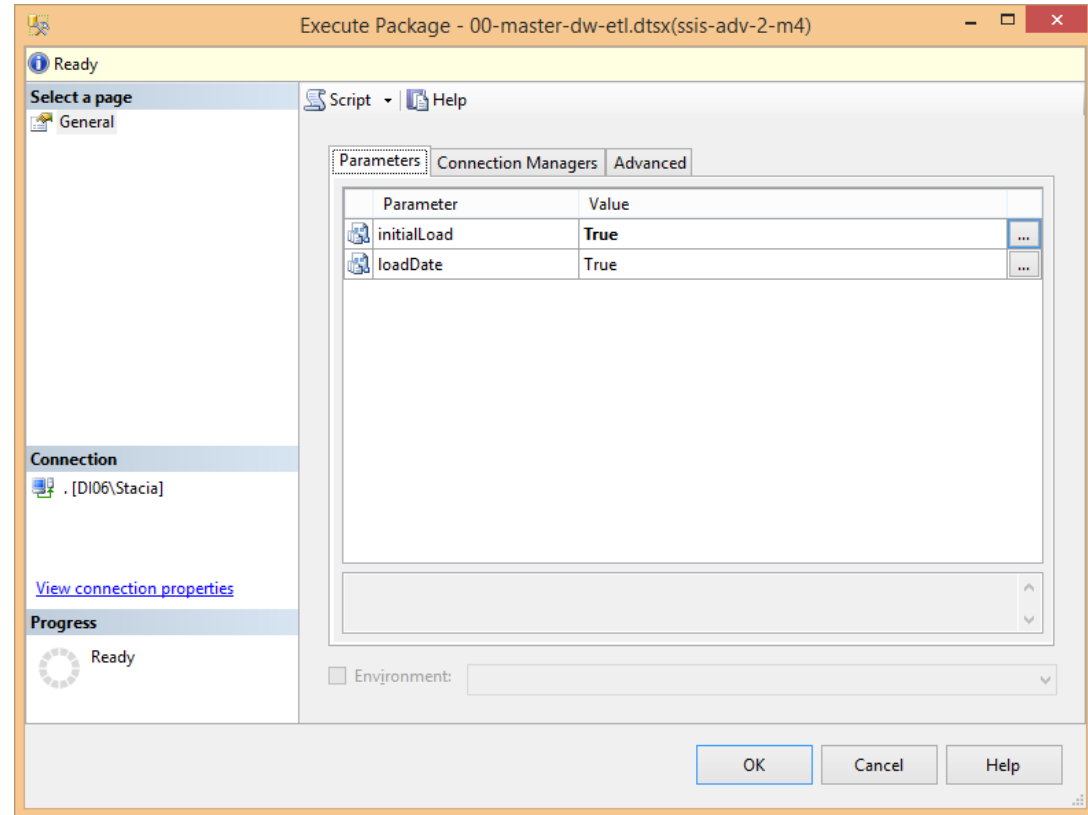

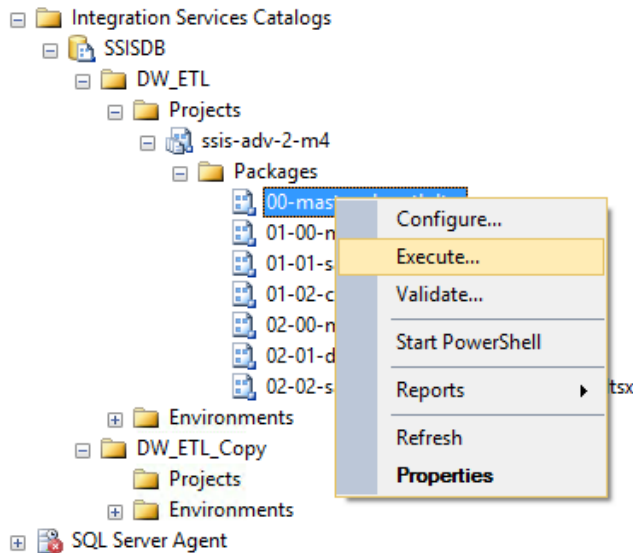

Scheduled Job

```
DTEXec /ISSERVER
"\SSISDB\DW_ETL\sis-adv-2-m4\00-master-dw-etl.dtsx" /SERVER "." /Envreference 2 /Par
"$Project::initialLoad(Int32)";1
/Par "CM.AdventureWorksDW_demo.Servername";.
/Par "$ServerOption::SYNCHRONIZED(Boolean)";True
```

DTEXec

Package Execution with User Interface

Configure execution:

- Parameter values
- Connection managers
- Property overrides
- Logging
- Environment

Package Execution with T-SQL

```
Declare @execution_id bigint
EXEC [SSISDB].[catalog].[create_execution] @package_name=N'00-master-dw-etl.dtsx',
@execution_id=@execution_id OUTPUT, @folder_name=N'DW_ETL',
@project_name=N'ssis-adv-2-m4', @use32bitruntime=False, @reference_id=2
```

```
Select @execution_id
DECLARE @firstLoad smallint = 0
EXEC [SSISDB].[catalog].[set_execution_parameter_value] @execution_id,
@object_type=20, @parameter_name=N'initialLoad', @parameter_value=@firstLoad
```

```
EXEC [SSISDB].[catalog].[start_execution] @execution_id
GO
```

Locate in
catalog.environment_references
view

20: Project parameter
30: Package parameter
50: Logging parameters

Package Execution with DTEXec

Location ID

Environment
reference ID

DTEXec /ISSERVER

Path and package name

Server name

"\SSISDB\DW_ETL\ssis-adv-2-m4\00-master-dw-etl.dtsx" /SERVER "."

/Envreference 1 /Par "\$Project::initialLoad(Int32)";1

Parameter

/Par "CM.AdventureWorksDW_demo.Servername";.

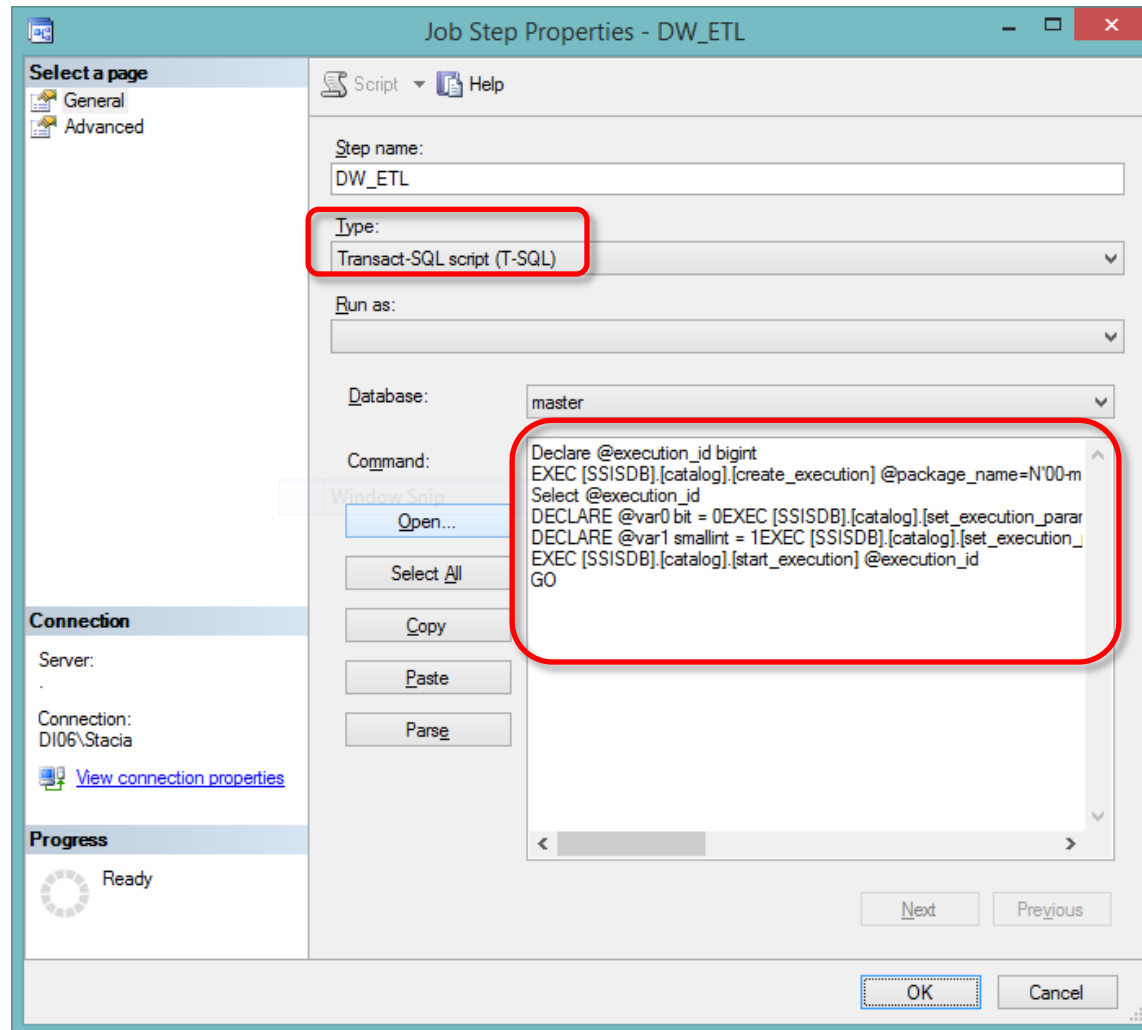

Connection Manager

/Par "\$ServerOption::SYNCHRONIZED(Boolean)";True

Properties

Instruction for DTEXEC to wait for results

Package Execution with SQL Server Agent

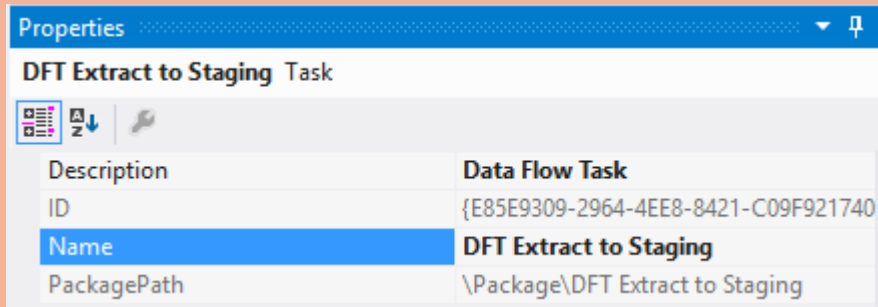

Step type:
Transact-SQL

T-SQL stored
procedures for
package execution

Data Taps in Package Execution

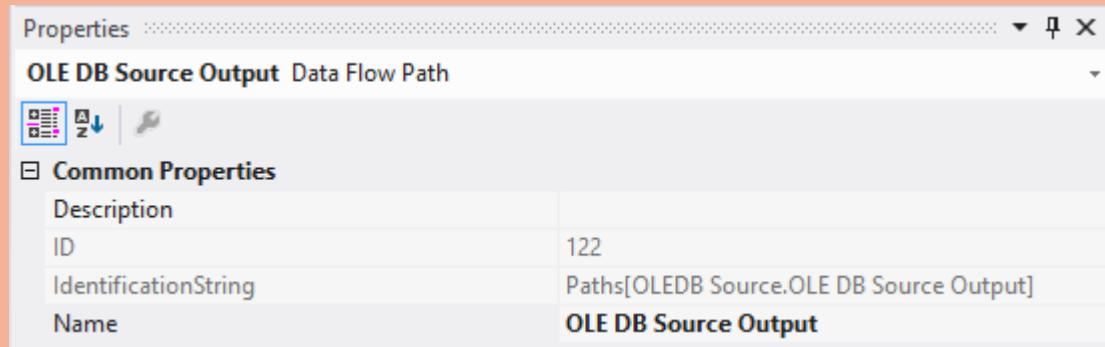

```
EXEC [SSISDB].[catalog].[add_data_tap]
@execution_id=@execution_id,
@task_package_path=N'\Package\DFT Extract to Staging',
@dataflow_path_id_string=N'Paths[OLEDB Source.OLE DB Source
Output]', @data_filename='mydatatap.csv'
```

Properties	
DFT Extract to Staging Task	
Description	Data Flow Task
ID	{E85E9309-2964-4EE8-8421-C09F921740}
Name	DFT Extract to Staging
PackagePath	\Package\DFT Extract to Staging

Data Taps in Package Execution

```
EXEC [SSISDB].[catalog].[add_data_tap]
@execution_id=@execution_id,
@task_package_path=N'\Package\DFT Extract to Staging',
@dataflow_path_id_string=N'Paths[OLEDB Source.OLE DB Source
Output]', @data_filename='mydatatap.csv'
```

Data Taps in Package Execution

```
EXEC [SSISDB].[catalog].[add_data_tap]
@execution_id=@execution_id,
@task_package_path=N'\Package\DFT Extract to Staging',
@dataflow_path_id_string=N'Paths[OLEDB Source.OLE DB Source
Output]', @data_filename= 'sourcedatatap.csv'
```

SQL Server 2014

Program Files\Microsoft SQL Server\120\DTS\DataDumps

SQL Server 2012

Program Files\Microsoft SQL Server\110\DTS\DataDumps

Summary

- **SSIS Catalog**

- Catalog creation, configure properties for logging and package versioning

- **Deployment Options**

- Deployment Wizard, ISPAC

- **Environments**

- Environment creation, environment variables, environment references

- **Package Execution**

- User interface, T-SQL, DTEXec, SQL Server Agent job, data taps
