Debugging Packages

Exploring debugging tools in Integration Services

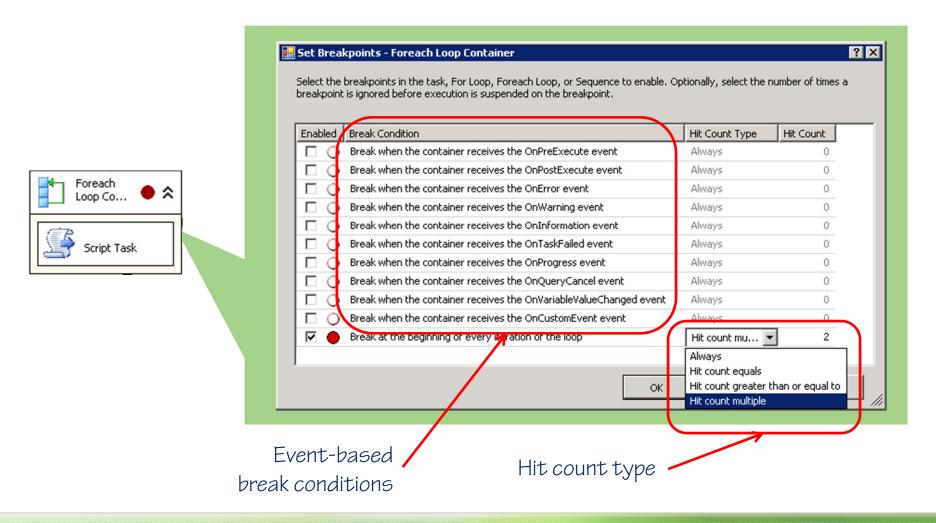

Overview

- Breakpoints
- Debug Windows
- Script Task Debugging
- Script Component Debugging
- Data Viewer

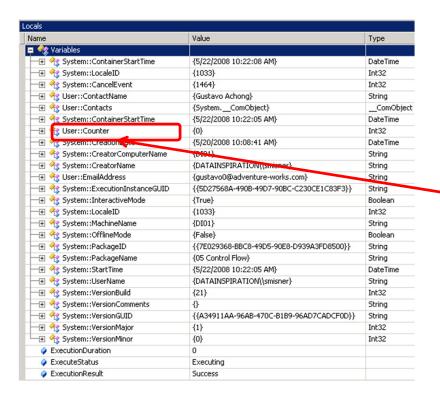

Breakpoints

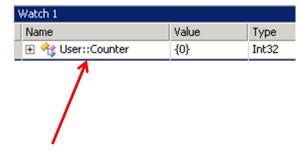

Debug Windows

Locals

Watch

Right-click and select Add Watch

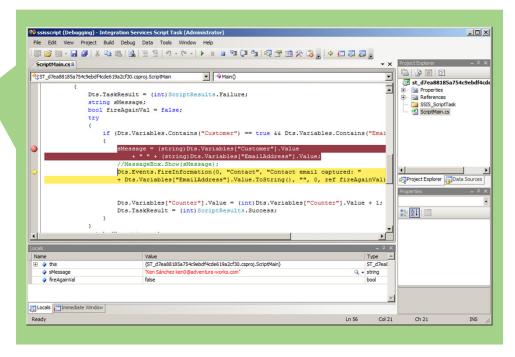

Right-click and select Edit Value

Debugging the Script Task

Important: Run project in 32-bit mode to debug scripts Query a variable ?sMessage

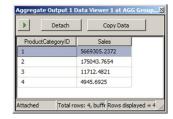

Debugging a Script Component

No support for breakpoints!

Add a data viewer

Call an event method in the code

this.ComponentMetaData.EventMethod(
informationCode, subComponent, description,
helpFile, helpContext, ref fireAgain)

Use SSIS logging by calling the Log method in the code

this.Log(messageText, dataCode, dataBytes)

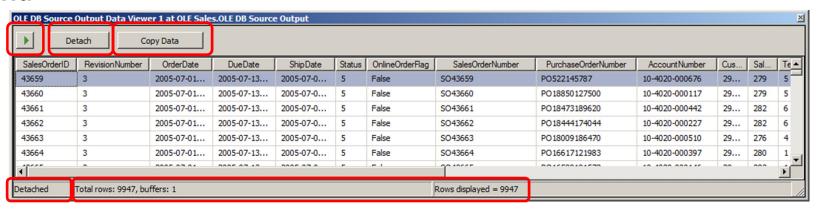

Use a MessageBox

System.Windows.Forms.MessageBox.Show(messageString)

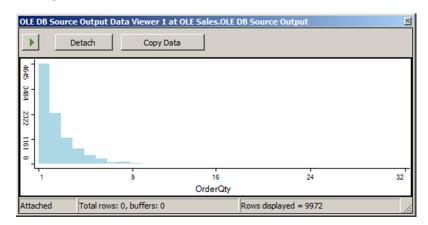

Data Viewer

Grid

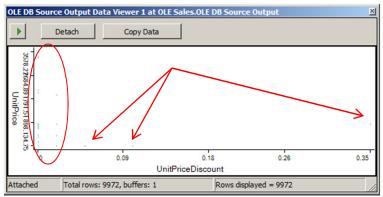

Histogram

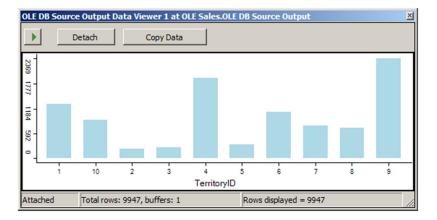

Data Viewer

Scatter Plot

Chart

Summary

Breakpoints

Task or container, event-based conditions, configurable hit count for loops

Debug Windows

Locals and watch windows, update variable value during runtime

Script Task Debugging

Breakpoints in script, separate debug windows, 32-bit mode in BIDS

Script Component Debugging

Data viewer, script options: event method, log method, message box

Data Viewer

Grid, histogram, scatter plot, chart
